

Chemi Pack

Overview of Chemi Pack:

The Chemi Pack includes all required reagents to generate high sensitivity Western blotting in one hour for 10 mini blots. The blocking buffer is specially formulated to increase sensitivity while decreasing the background. Specific HRP Conjugate amplifies signal to increase sensitivity while minimizing the duration of incubation. The wash buffer contains a gentle, non-ionic detergent that rapidly removes non-specifically bound material from the membrane without disrupting the antibody-antigen complex. Glossy ECL substrate is included for sensitive, long-lasting and flexible detection using X-ray film or CCD camera. Provided ready-to-use solutions designed to simplify your Western blot workflow.

- Complete Western blot in 1 hour
- Fewer hands-on manipulations equate to consistent data
- Contains all critical reagents required to perform high quality chemiluminescent Western
- Available for both mouse and rabbit primary antibodies

For Orders:

| Catalog Number | Product | Size |
|----------------|------------------------|-----------|
| NB051205410 | Chemi Pack anti-Mouse | 10 assays |
| NB051205510 | Chemi Pack anti-Rabbit | 10 assays |

Protocol:

Traditional Western

Chemi Pack

Kit Contents:

| Item | Quantity |
|---|----------|
| Buffer A, Blocking/Incubation Buffer | 100 mL |
| Buffer B, Mouse or Rabbit HRP Conjugate | 500µL |
| Buffer C, Wash Buffer | 250mL |
| Glossy ECL Substrate | 50mL |
| Glossy ECL Peroxide | 50mL |
