

ELISA Stop Solution

Description:

ELISA Stop Solution is a ready-to-use solution designed to be used as a stop solution in ELISA applications using horseradish peroxidase and TMB substrate solution. TMB substrate solution produces a blue color when reacted with horseradish peroxidase. At the end of the TMB incubation, one volume of ELISA Stop Solution equal to the one volume of TMB substrate solution is added to the wells to terminate the horseradish peroxidase reaction. The reaction can be stopped by addition of stop reagent, and the color turns from blue to yellow with 2-3 fold increased absorbance values at 450 nm. Read absorbance at 450 nm within 60 minutes.

For Orders:

Catalog Number	Product	Size
NB002409100	ELISA Stop Solution, 100 mL	100 mL
NB002409500	ELISA Stop Solution, 100 mL	500 mL
NB002409102	ELISA Stop Solution, 100 mL	1 L
