

TBST Buffer

Description:

TBST buffer (Tris-buffered saline with Tween-20 detergent) is an isotonic buffer salt solution used in biology. The formulation of TBST as a 10X concentrate provides researchers allowing for dilution to the necessary concentration as required by specific experimental conditions. It is also available in a ready-to-use 1X formulation.

It can be applied in Western Blot experiments to wash away reagents such as non-specific binding antibodies on membranes, as well as in immunofluorescence and immunohistochemistry experiments for the preparation of the blocking solution, the preparation of primary or secondary antibodies, and the washing of primary or secondary antibodies after incubation to reduce the background and enhance the signal-to-noise ratio.

For Orders:

Catalog Number	Product	Size
NB001513500	TBST Buffer, 1X	500 mL
NB001513102	TBST Buffer, 1X	1 L
NB001512100	TBST Buffer, 10X	100 mL
NB001512500	TBST Buffer, 10X	500 mL
NB001512102	TBST Buffer, 10X	1 L

- **Ready to dilute and ready to use** – 1X and 10X concentrated formulations are available
- **Reduced preparation time** – no reagents to weigh and filter
- **Quality-controlled reagent** – reproducible results
